DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 9-13, 16-22, 24-26, 28-31, 34 are rejected under 35 U.S.C. 102(b) as being anticipated by Eida et al (US Patent 4,804,411).

Eida et al teach a recording liquid comprising a solution of a recording agent. The recording agent has a structure containing a plural number of structural units linked together through a linking group or groups. The structural unit may be a dye residue (abstract and col. 2 lines 23-32). The structural units refer to the dye residues represented by the formulae (A), (B), (C) and (D) and the linking group to the groups represented by the following formulae (X), (Y), (Z):

The reference further teaches that the dye content is in the amount of 1 to 10 percent by weight (col. 37 lines 39-49). The composition as taught by appears to anticipate the claimed invention.

Allowable Subject Matter

Claims 3-8, 14, 15, 23, 27, 32 and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The references alone or in combination fail to teach the specific dyes and linking groups set forth in claims listed above.

Claims 35-44 are allowed.

The following is an examiner's statement of reasons for allowance:

The references alone or in combination fail to teach a system comprising (a) an alumina or silica-containing porous media substrate; (b) an ink jet ink comprising a first dye molecule chemically coupled to a second dye molecule through a linker group, said multimeric dye as whole being substantially stable in the presence of interfering metals present in the alumina- or silica containing porous media substrate, and (c) an ink jet pen configured for jetting the ink jet ink onto the alumina- or silica-containing porous media substrate. Therefore the references are not seen to teach or fairly suggest the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The remaining references listed on forms 892 and 1449 have been reviewed by the Examiner and are considered to be cumulative to or less material than the prior art references relied upon in the above rejections.
